General

Johnson Controls 5951J Series intelligent plug-in thermal detectors with integral communication has features that surpass conventional detectors. Point ID capability allows each detector's address to be set with decade address switches, providing exact detector locations. 5951J Series thermal detectors use an innovative thermistor sensing circuit to produce 135°F/57°C fixed-temperature (5951J) and rate-of-rise thermal detection (5951RJ) in a low-profile package. 5951HJ provides fixed high-temperature detection at 190°F/88°C. These thermal detectors provide effective, intelligent property protection in a variety of applications. 5951J Series detectors are compatible with the Johnson Controls Intelligent Fire Alarm Control Panels (FACPs).

FlashScan® (U.S. Patent 5,539,389) is a communication protocol that greatly enhances the speed of communication between analog intelligent devices. Intelligent devices communicate in a grouped fashion. If one of the devices within the group has new information, the panel's CPU stops the group poll and concentrates on single points. The net effect is response speed greater than five times that of earlier designs.

Applications
Use thermal detectors for protection of property. For further information, go to systemsensor.com for manual 156-407-00, Applications Manual for System Smoke Detectors, which provides detailed information on detector spacing, placement, zoning, wiring, and special applications.

Installation
The 5951J Series plug-in intelligent thermal detector uses a separate base to simplify installation, service, and maintenance. Installation instructions are shipped with each detector.

Mount base (all base types) on an electrical backbox which is at least 1.5” (3.81 cm) deep. Suitable boxes include:
- 4.0” (10.16 cm) square box.
- 3.5” (8.89 cm) or 4.0” (10.16 cm) octagonal box.
- Single-gang box (except relay or isolator base).

With B501BH-2 or B501BHT-2 base, use a 4.0” (10.16 cm) square box.

With B224RB or B224BI base, use a 3.5” (8.89 cm) or 4.0” (10.16 cm) octagonal box, or a 4.0” (10.16 cm) square box.

NOTE: 1) Because of the inherent supervision provided by the SLC loop, end-of-line resistors are not required. Wiring “T-taps” or branches are permitted for Style 4 (Class “B”) wiring. 2) When using relay or sounder bases, consult JCI-60084 (M500XJ) for device limitations between isolator modules and isolator bases.
